

Twinkle twinkle  
little star,  
how I wonder  
what you are,  
up above  
the world so high,  
looking down  
at dangerously  
high levels of  
CO<sub>2</sub> in the  
atmosphere.

The science shows that climate change is caused by heat-trapping gases such as CO<sub>2</sub>, which is created whenever we use energy like electricity made from gas, oil or coal. As CO<sub>2</sub> levels rise, more and more heat is trapped in the atmosphere, causing changes in our climate.

**IT'S OUR CHILDREN WHO'LL REALLY PAY THE PRICE**
